Utopia Deli — Meal Prep Ordering System

Internal Implementation Guide

Document ID: UD-MP-IMPL-001

Version: 1.1

Status: Internal — Systack Only

Source System: Utopia Deli (Live since 2026-06-15)

Date: 2026-06-29

Builder: SOL / Assembly

Brand Reference

ROLE	COLOR	HEX

1. System Architecture

```
Customer visits meal-prep page
  → Views 7 meal cards (display only)
  → Selects package quantities (+/- buttons)
    → Pricing: $84/meal set + $42/dessert set + $50 labor/set
    → Checkout via Square
      → Confirmation page (meal-prep variant)
      → Pickup: Thursday 12:30–7:30 PM
```

2. Core Components

Frontend

- **File:** catering/catering-form.js (shared with catering lead system)
- **Key constants:**
 - MEALS_PER_PACKAGE = 7
 - MEAL_SET_PRICE = 84 (dollars)
 - DESSERT_SET_PRICE = 42 (dollars)
 - LABOR_PER_SET = 50 (dollars)

Package Functions

```
function addWeeklyPackage() {
  weeklySets++;
  updateMPTotals();
}

function removeWeeklyPackage() {
  if (weeklySets > 0) weeklySets--;
  updateMPTotals();
}

function addDessertPackage() {
  dessertSets++;
  updateMPTotals();
}

function removeDessertPackage() {
  if (dessertSets > 0) dessertSets--;
  updateMPTotals();
}
```

Pricing Calculation

```
function updateMPTotals() {
  const mealSubtotal = weeklySets * MEAL_SET_PRICE;
  const dessertSubtotal = dessertSets * DESSERT_SET_PRICE;
  const laborTotal = weeklySets * LABOR_PER_SET;
  const subtotal = mealSubtotal + dessertSubtotal + laborTotal;
  const tax = subtotal * 0.0952;
  const total = subtotal + tax;
}
```

3. Setup Process (Replication)

Step 1 — Deploy Meal Prep Page

- Copy meal prep HTML/JS to client domain
- Configure package pricing constants
- Set pickup day and deadline

Step 2 — Configure n8n

- Meal prep uses same Square checkout workflow as regular orders
- Different redirect URL: `payment-confirmed-meal-prep/`
- Order source tag: `meal-prep`

Step 3 — Set Business Rules

- Minimum: 1 meal set
- Pickup: Thursday only
- Deadline: Wednesday
- Labor: per-set (not flat)

4. Critical Constraints

CONSTRAINT	DETAIL
Package model	No individual meal selection — sets only
Labor scaling	\$50 per meal set, not flat
Tax rate	9.52% (not 6.5% — was mislabeled)
Meals per set	7 (was 6 before 2026-06-15 fix)
Pickup day	Thursday only

5. Known Pitfalls (All Fixed)

PITFALL	SYMPTOM	FIX
Tax label 6.5% but calc 9.52%	Customer confusion	Corrected label to 9.52%
Flat \$50 labor	Unfair for multi-set orders	Changed to \$50/set
6 meals per set	Wrong package size	Changed to 7
Individual meal toggles	Confusing UX	Replaced with package +/-

6. Production Fix Log (2026-06-29)

Bug: Submit Button Shows Error After Order Processes

Symptom: Customer clicks “Pay & Place Order” → order processes in n8n → Square link created → email sent → DB saved → but browser shows “Something went wrong”

Root Causes: 1. **Frontend:** `mp-pickup` element referenced in JS but never existed in HTML → null reference crash before fetch 2. **n8n Workflow:** `MP Format Response1` node not connected to `Respond to Webhook` node → empty HTTP response

Fixes Applied:

FIX	FILE	DETAIL
Hardcode pickup time	<code>catering/catering-form.js</code>	<code>pickup = 'Thursday 12:30 PM - 7:30 PM'</code>
Fix payload format	<code>catering/catering-form.js</code>	Match meal-prep branch: <code>body.pricing.subtotal/labor/tax/total , items with qty + price</code>
Connect response node	n8n workflow	Wire <code>MP Format Response1</code> → <code>Respond to Webhook</code>

Commits: `98f792d` , `92ec9a0`

Verification: -  Order submits successfully -  Square payment link returned in response
-  Browser redirects to payment page -  Confirmation email sent -  Order saved to database
